

End-to-End Setup: Microsoft Sentinel & Automated Response

Objective:

- ✓ Set up Microsoft Sentinel for threat detection
- ✓ Configure workbooks to visualize attack patterns
- ✓ Use Logic Apps to send alerts to Teams
- ✓ Automatically block IPs in response to brute force attacks

PART 1: Setting Up Microsoft Sentinel

STEP 1: Create an Azure Log Analytics Workspace

Microsoft Sentinel **needs** a **Log Analytics Workspace** to store logs.

- 1 Go to [Azure Portal](#)
- 2 Search for **Log Analytics Workspaces** in the top bar
- 3 Click “Create”
- 4 Fill in details:
 - **Subscription:** Choose your Azure subscription
 - **Resource Group:** Click “Create new” and name it **SentinelRG**
 - **Workspace Name:** Set it as **SentinelWorkspace**

- **Region:** Choose the closest data center

5 Click “Review + Create”

Create Log Analytics workspace

A Log Analytics workspace is the basic management unit of Azure Monitor Logs. There are specific considerations you should take when creating a new Log Analytics workspace. [Learn more](#)

With Azure Monitor Logs you can easily store, retain, and query data collected from your monitored resources in Azure and other environments for valuable insights. A Log Analytics workspace is the logical storage unit where your log data is collected and stored.

Project details
Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

STEP 2: Enable Microsoft Sentinel

Now, we'll add **Microsoft Sentinel** to your Log Analytics Workspace.

- 1 Go to [Azure Portal](#)
- 2 Search for **Microsoft Sentinel**
- 3 Click “Add”
- 4 Select your **SentinelWorkspace**
- 5 Click “Add Microsoft Sentinel”

Microsoft Azure

Search resources, services, and docs (G+/)

SentinelWorkspace	southafricanorth	sentinelrg	Azure subscription 1	Default Directory

[Add](#) [Cancel](#)

✓ Microsoft Sentinel is now active!

PART 2: Setting Up a Virtual Machine to Simulate an Attack

STEP 3: Create a Windows Virtual Machine

We need a **target machine** for the Brute Force Attack.

① Go to Azure Portal > **Virtual Machines**

② Click "Create" > "Azure Virtual Machine"

③ Configure VM Details:

- **Resource Group:** Use `SentinelRG`
- **VM Name:** `TargetVM`
- **Region:** Choose the same region as Sentinel
- **Image:** Select `Windows Server 2022`
- **Size:** Choose `B2ms`
- **Username & Password:** Set up credentials
 - ④ Click "Next: Disks" > Keep defaults
 - ⑤ Click "Next: Networking"
- **Public IP:** Yes (we need it for RDP attacks)

- **Inbound Rules: Allow RDP (3389)**

6 Click “Review + Create”

Basics	
Subscription	Azure subscription 1
Resource group	SentinelIRG
Virtual machine name	TargetVM
Region	Central US
Availability options	Availability zone
Zone options	Self-selected zone
Availability zone	1
Security type	Trusted launch virtual machines
Enable secure boot	Yes
Enable vTPM	Yes
Integrity monitoring	No
Image	Windows Server 2022 Datacenter: Azure Edition - Gen2
VM architecture	x64

✓ Your Virtual Machine is now running!

STEP 4: Simulate a Brute Force Attack on the VM

Now, we **generate failed login attempts** to trigger Sentinel alerts.

- 1 **Copy the Public IP Address** of **TargetVM**
- 2 **Open Remote Desktop Connection (RDP)** on your computer
- 3 **Enter the IP Address** and click “Connect”
- 4 **Try logging in with the wrong password multiple times**
- 5 **Repeat this at least 10 times in 5 minutes**

 **This generates Event ID 4625 (Failed Login Attempts)**

PART 3: Connecting Microsoft Sentinel to Data Sources

STEP 5: Connect Windows Security Logs to Sentinel

- 1 **Go to Microsoft Sentinel**
- 2 **Click Data Connectors**
- 3 **Search for Windows Security Events**

Microsoft Azure

Search resources, services, and docs (G+/)

Windows Security Events

Microsoft Provider Microsoft Support 3.0.9 Version

Description

Note: Please refer to the following before installing the solution:

- Review the solution [Release Notes](#)

The Windows Security Events solution for Microsoft Sentinel allows you to ingest Security events from your Windows machines using the Windows Agent into Microsoft Sentinel. This solution includes two (2) data connectors to help ingest the logs.

- Windows Security Events via AMA** - This data connector helps in ingesting Security Events logs into your Log Analytics Workspace using the new Azure Monitor Agent. Learn more about ingesting using the new Azure Monitor Agent [here](#). **Microsoft recommends using this Data Connector.**

Security Events via Legacy Agent

Not connected Status Microsoft Provider -- Last Log Received

Description

You can stream all security events from the Windows machines connected to your Microsoft Sentinel workspace using the Windows agent. This connection enables you to view dashboards, create custom alerts, and improve investigation. This gives you more insight into your organization's network and improves your security operation capabilities.

Last data received --

Author Microsoft Supported by Microsoft Corporation | Email

Related content

Instructions

Choose where to install the agent:

- Install agent on Azure Windows Virtual Machine
- Install agent on non-Azure Windows Machine

2. Select which events to stream

- All events - All Windows security and AppLocker events.
- Common - A standard set of events for auditing purposes.
- Minimal - A small set of events that might indicate potential threats. By enabling this option, you won't be able to have a full audit trail.
- None - No security or AppLocker events.

☐ None ☐ Minimal ☐ Common ☒ All Events

✓ Now, Sentinel will alert you when a Brute Force Attack happens!

Step 4: Configure Workbooks for Visualization

1. In Microsoft Sentinel, go to Workbooks

2. Click **Create New**
3. Add a **Visualization Tile**

Choose **Query** and paste:

```
SecurityEvent  
| where EventID == 4625  
| summarize FailedAttempts = count() by IPAddress,  
bin(TimeGenerated, 5m)  
| order by FailedAttempts desc
```

4. Click **Apply Changes**
5. Save as "**Brute Force Dashboard**"

 You now have a live dashboard showing attack trends.

PART 5: Automating Threat Response & ChatGPT Report

STEP 7: Create a Logic App to Integrate Sentinel with ChatGPT

Why? This will automatically summarize the attack details and send them to the security team.

♦ Create the Logic App

- 1 Go to **Azure Portal**
- 2 Search for **Logic Apps**
- 3 Click "Create"
- 4 Set Name: **ThreatSummaryAI**
- 5 Resource Group: Use **SentinelRG**
- 6 Region: Choose the same region as Sentinel

7 Click Review + Create

Resource group : [SentinelRG](#)

> Deployment details

✓ Next steps

Go to resource

✓ Now, let's build the workflow!

STEP 8: Configure Logic App to Send Alerts to ChatGPT

◆ Add Sentinel as a Trigger

- 1 Open ThreatSummaryAI Logic App
- 2 Click 'Logic App Designer'

PART 6: Configuring Logic App to Send Alerts to ChatGPT

STEP 9: Add Microsoft Sentinel as a Trigger

- 1 Open ThreatSummaryAI Logic App
- 2 Click Logic App Designer
- 3 Click Blank Logic App
- 4 Click + New Step
- 5 Search for Microsoft Sentinel
- 6 Select "When an incident is created"

✓ This will trigger the Logic App whenever a security incident occurs in Sentinel!

Step 7: Extract Incident Details

1. Click "New Step"

2. Search for **Microsoft Sentinel**
3. Select "**Get Incident**"
4. In **Incident ID**, select **Incident ID** from **Dynamic content**
5. Click **Save**

📌 This fetches details like the attacker's IP, severity, and timestamp.

STEP 10: Send Incident Details to ChatGPT

Now, we need to **send the incident data to ChatGPT** for a summary.

- 1 Click + **New Step**
- 2 Search for **HTTP**
- 3 Select "**HTTP**" action
- 4 Configure the HTTP request:

- **Method:** **POST**
- **URL:** **<https://api.openai.com/v1/chat/completions>**

Headers:

```
json
CopyEdit
{
  "Authorization": "Bearer YOUR_OPENAI_API_KEY",
  "Content-Type": "application/json"
}
```

•

Body:

```
json
CopyEdit
{
  "model": "gpt-4",
  "messages": [
    {
      "role": "system",
```

```
        "content": "You are a cybersecurity analyst. Generate a  
summary report of the detected security incident."  
    },  
    {  
        "role": "user",  
        "content": "Incident Details: {IncidentDescription}"  
    }  
]  
}
```

-

5 Click Save

✓ Now, every time Sentinel detects a threat, ChatGPT will summarize it!

STEP 11: Send ChatGPT's Summary via Email or Teams

Option 1: Send via Email

1 Click + New Step

2 Search for Office 365 Outlook

3 Select "Send an email (V2)"

4 Fill out the details:

- To: Security Team Email
- Subject: [URGENT] Automated Threat Report
- Body: Use the output from ChatGPT

Option 2: Send via Microsoft Teams

1 Click + New Step

2 Search for Microsoft Teams

3 Select "Post a message (V3)"

4 Choose the security channel

5 Use ChatGPT's response as the message

✓ Now, Sentinel incidents will be summarized by ChatGPT and sent via Email or Teams!

FINAL TEST: Simulate an Attack & Get a Report

Now, let's **test everything**:

- ❏ **1 Try the Brute Force Attack on your VM again**
- ❏ **2 Check Sentinel** → You should see a **new incident**
- ❏ **3 Check the Logic App** → It should **trigger automatically**
- ❏ **4 Check your Email/Teams** → You should receive a **ChatGPT-generated summary**
